

RECEIVE THE MOST EFFECTIVE HOME WATER TREATMENT FROM KNOWLEDGEABLE PROFESSIONALS.

"My whole house carbon filter helps me to have peace of mind that I'm doing what I can to improve my family's water quality. And my Flow-Tech Home saves me time and money when it comes to all my cleaning. Plus there's no lugging salt in to refill the softener. Maintenance-free all the way around, and I love that."

- Mrs. Sandy Ward

BETTER QUALITY WATER FOR YOUR FAMILY, YOUR HOME AND THE ENVIRONMENT

IT'S IN THE REPORT:

All water municipalities are required by the EPA to provide annual water quality reports. These reports identify where your water comes from, how it's treated, and what's still found in the water post treatment. There are also boilerplate warnings worded as softly as possible. Read your report carefully. What they can't tell you about is the other 2,500+ possible contaminants they don't test for.

All municipal water users should have a carbon system. It will reduce or remove impurities, as well as potentially harmful chemicals and by-products.

In areas with seven plus grains hardness a Flow-Tech Home anti-scale system is recommended to eliminate scale formation. Or if you like the slick feel of soft water, a traditional softener will best serve your needs.

WATER TREATMENT OPTIONS INCLUDE:

WATER FILTRATION

Flow-Tech Home Whole House CS Carbon Filter

A great solution for chlorine treated municipal water customers

Flow-Tech Home Whole House CX Carbon Filter

Optimal for chlorine and/or chloramine treated municipal water customers

Finecel® Ultra Filter Drinking Water System

3 Stage ultra filter cleans to .015 microns with no water waste, ph change or mineral reduction

Flow-Tech Home RO Drinking Water System

Provides the purest possible water directly from your tap

The Little Green House indicates a product with positive environmental impact.

WATER CONDITIONING

FLOW-TECH HOME®

Descalses and prevents new scale build-up for improved efficiency of water using appliances

FLOW-TECH HOME® Plus

The greenest option for municipal water customers with hard water, combining a carbon system with the Flow-Tech Home anti-scale system

Flow-Tech Ion Exchange Water Softener

Removes the calcium and magnesium in hard water and is recommended if heavy metals are present

Flow-Tech Filter/Softener Duo System

This is the recommended system for municipal water customers desiring soft water

BENEFITS OF FLOW-TECH WATER SYSTEMS:

Hi-Tech ▲

FLOW-TECH HOME is committed to using the highest quality materials and providing the best technology available. The FLOW-TECH HOME anti-scale system is revolutionary descaling technology that propagates a signal through the water column to descale the lines and prevents scale from forming without the brine discharge and water waste of softeners. All of our tank systems utilize a vortex plate increasing efficiency and reducing water waste.

Cleaner ▲

Chemicals used in water treatment are necessary to kill the bacteria and virus found in source water. Once the water reaches your house however, it is better to remove as many impurities as possible to provide your family with better quality of water. Water treatment can also protect your home's plumbing system from the damage that can be associated with chemical erosion. Anti-scale systems alleviate the need for harsh chemicals to remove scale.

Eco-Friendly ▲

Just because we can recycle these bottles does not mean that we do. The Container Recycling Institute reports that 86 percent of plastic water bottles in the U.S. end up as garbage or litter. Filtered water is more convenient, cost effective and WAY better for the planet. Water conditioning is eco-friendly as well, helping appliances to be more energy efficient and extending their useful life as well as reducing the soap needed.

Effective ▲

The water we drink is only part of the concern. In the bath or shower, your body absorbs water and you inhale the chemicals through the steam. It is estimated that you ingest as many of the impurities in your water in a 10 minute shower as you do when you drink 8 glasses of unfiltered water. Whole house solutions deliver filtered water to every tap in your home, including your showers. Drinking water systems can provide bottled water straight from the tap.
